BEYOND GOLDEN BEADS WORKSHOP

Children's House

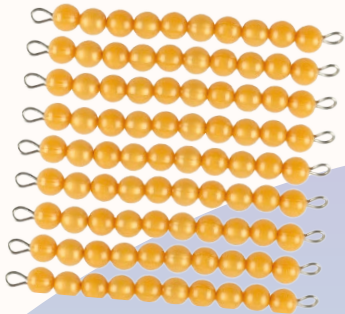

This workshop is designed to revisit the four operations with golden beads, stamp game and bead frames. We will also review math charts, snake game, addition and subtraction strips boards, multiplication and division boards and memorization material. This workshop is designed for people familiar with Montessori math, but just need a refresher.

Presented by Shanna Honan

Elementary

We will also have a lower elementary strand available where we will introduce the large hierarchical material, large bead frame, checker board and racks and tubes. These activities all involve using the designated colors of the decimal system, first introduced with the stamp game. Together with the memorization games, the children move from concrete materials to abstraction in the math area. Again, this workshop is designed for people familiar with Montessori math, but who just need a refresher.

Presented by Carmel Shevis
